Name: _____

The Dolphin

It is a friendly animal. It can swim very fast. Sometimes, dolphins play with fish and squid. They talk to each other in groups and live in the ocean!

Questions
What color is the clownfish?
a) Green
b) Orange
c) Blue

The Clownfish

The clownfish is a small fish. It is orange with white stripes. The clownfish lives in the ocean, inside a sea anemone. The sea anemone keeps the clownfish safe. The clownfish swims around the anemone but never goes too far.

Clownfish eat small plants and animals in the water. They are very good swimmers. Baby clownfish are tiny, but they grow fast. Some clownfish can change from boy to girl. Clownfish are special and colorful fish in the sea!

Questions

What color is the clownfish?

- a) Green and blue
- b) Orange and white
- c) Black and yellow

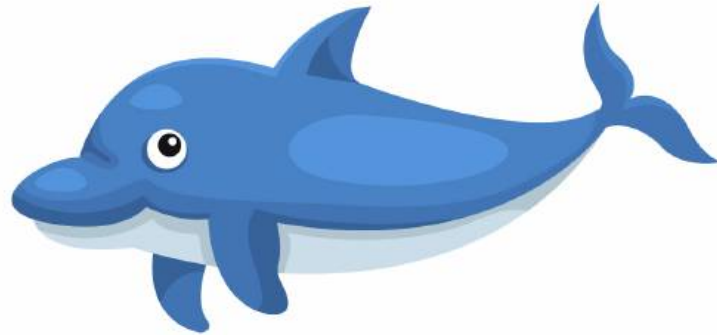

Where does the clownfish live?

- a) In a tree
- b) In a sea anemone
- c) In a cave

What do clownfish eat?

- a) Chocolate
- b) Small plants and animals
- c) Bread

The Dolphin

The dolphin is a smart and friendly animal. It is blue and has a long body. Dolphins live in the ocean and swim very fast. They jump high in the water and play with each other. Sometimes, dolphins swim with boats and people.

Dolphins eat small fish and squids. They talk to each other using sounds and clicks. Dolphins live in groups and help each other. They are one of the smartest animals in the ocean!

Questions

What color is the dolphin?

- a) Red
- b) Blue
- c) Green

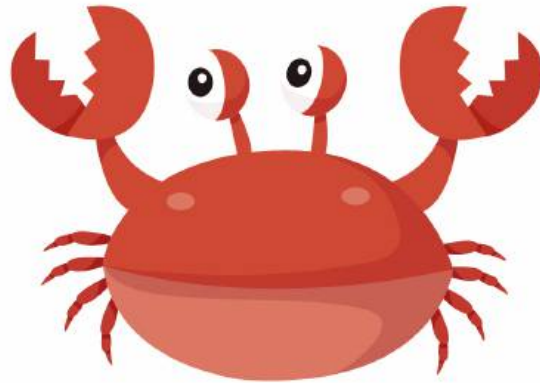

What do dolphins eat?

- a) Small fish and squids
- b) Grass
- c) Apples

How do dolphins talk to each other?

- a) With sounds and clicks
- b) With their hands
- c) By writing

The Crab

The crab is a small animal with a hard shell. It has two big claws and eight legs. Crabs walk sideways on the sand. They live in the ocean and on the beach. Some crabs hide under rocks to stay safe.

Crabs eat small fish, plants, and tiny animals. They use their claws to catch food. Some crabs have colorful shells. They can be red, orange, or even blue! Crabs are interesting animals of the sea.

Questions

How many legs does a crab have?

- a) Four
- b) Six
- c) Eight

Where do crabs live?

- a) In trees
- b) In the ocean and on the beach
- c) In the sky

What do crabs use to catch food?

- a) Their tail
- b) Their claws
- c) Their fins

The Octopus

The octopus is a soft animal with eight arms. It lives in the deep ocean. The octopus can change its color to hide from big fish. It swims fast and can squeeze into small places.

Octopuses eat crabs, fish, and small sea animals. They use their arms to catch food. They are very smart and can open shells and bottles. The octopus is one of the most amazing sea animals!

Questions

How many arms does an octopus have?

- a) Six
- b) Eight
- c) Ten

What does the octopus eat?

- a) Bananas and apples
- b) Crabs and fish
- c) Grass

What can the octopus do to hide?

- a) Sing a song
- b) Change its color
- c) Jump high

The Turtle

The turtle is a slow animal. It has a big, hard shell on its back. The shell keeps the turtle safe. Turtles live in the ocean and swim with their strong legs. Some turtles can live for more than 100 years!

Turtles eat plants, fish, and small sea animals. They lay eggs on the beach. Baby turtles are very small and must reach the ocean quickly. Turtles are peaceful and special animals in the sea.

Questions

Where do turtles live?

- a) In the ocean
- b) In the trees
- c) In the mountains

What do turtles eat?

- a) Candy and chocolate
- b) Plants and small fish
- c) Bread and cheese

Where do turtles lay eggs?

- a) In the sand on the beach
- b) In the water
- c) In the trees

The Starfish

The starfish is a beautiful sea animal. It has five arms and a soft body. Starfish live in the ocean and move very slowly. They do not have eyes, but they can feel and touch things in the water.

Starfish eat small animals and plants. If they lose an arm, they can grow a new one! They come in many colors, like red, blue, and orange. Starfish make the ocean colorful and interesting.

Questions

How many arms does a starfish have?

- a) Three
- b) Five
- c) Ten

What can a starfish do if it loses an arm?

- a) Grow a new one
- b) Fly away
- c) Sing a song

What colors can a starfish be?

- a) Only brown
- b) Red, blue, and orange
- c) Black and white

The Pufferfish

The pufferfish is a small fish with a round body. It lives in the ocean and swims slowly. When it feels danger, it fills its body with water and becomes big like a ball. This helps the pufferfish scare other animals.

Pufferfish eat small sea animals and plants. Some pufferfish have spikes on their bodies. They come in different colors, like yellow, brown, and white. Even though they are cute, some pufferfish are very poisonous!

Questions

What does the pufferfish do when it feels danger?

- a) Runs away
- b) Fills with water and becomes big
- c) Jumps out of the water

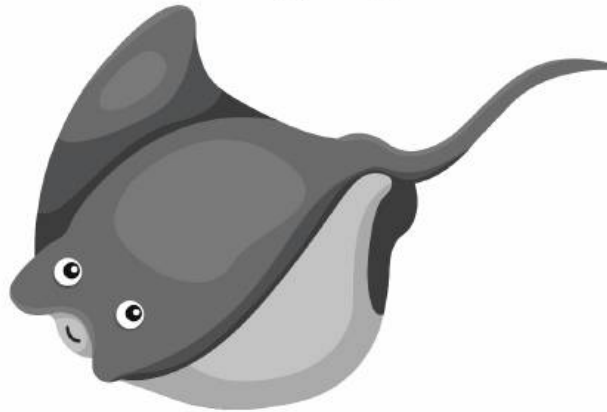

What do pufferfish eat?

- a) Pizza
- b) Small sea animals and plants
- c) Ice cream

Why are some pufferfish dangerous?

- a) They have big teeth
- b) They are poisonous
- c) They can fly

The Stingray

The stingray is a flat sea animal. It has a long tail and swims close to the ocean floor. Stingrays move their bodies like birds move their wings. They are very quiet and like to hide under the sand.

Stingrays eat small fish and crabs. They use their tails to protect themselves. Some stingrays have poison in their tails, so other animals do not attack them. They are gentle and beautiful creatures of the sea.

Questions

How does a stingray swim?

- a) Like a bird moves its wings
- b) Like a frog jumps
- c) Like a cat runs

Where do stingrays like to hide?

- a) In the trees
- b) Under the sand
- c) On top of rocks

What do stingrays eat?

- a) Small fish and crabs
- b) Bananas
- c) Cheese

The Sharks

Sharks are big and strong fish. They have sharp teeth and a big fin on their back. Sharks swim very fast and live in the deep ocean. Some sharks are small, but others, like the great white shark, are very big!

Sharks eat fish, crabs, and even other sea animals. They have a strong sense of smell and can find food easily. Even though sharks look scary, most of them do not hurt people. Sharks help keep the ocean healthy!

Questions

What do sharks have on their back?

- a) A big fin
- b) A small shell
- c) A soft tail

What do sharks eat?

- a) Fruits and vegetables
- b) Fish and sea animals
- c) Bread and cheese

Are all sharks big?

- a) Yes, all are big
- b) No, some are small
- c) No, they all live in lakes

The Hermit Crab

The hermit crab is a small crab with a soft body. It does not have a hard shell like other crabs. Instead, it finds an empty shell and lives inside it. When the hermit crab grows, it finds a bigger shell!

Hermit crabs eat small plants and animals in the sand. They have ten legs and two big claws. They live on the beach and in the shallow ocean. Hermit crabs are fun and interesting animals!

Questions

What does the hermit crab use for a home?

- a) A tree
- b) An empty shell
- c) A rock

How many legs does a hermit crab have?

- a) Four
- b) Six
- c) Ten

What do hermit crabs eat?

- a) Small plants and animals
- b) Chocolate and candy
- c) Bread and milk

The Seahorse

The seahorse is a small and special sea animal. It has a long nose, a small body, and a curly tail. Seahorses swim slowly and like to hold onto plants with their tails. They can be orange, yellow, or even purple!

Seahorses eat tiny sea animals. They do not have teeth, so they swallow their food whole. The most special thing about seahorses is that the father carries the babies in his belly! Seahorses are one of the most unique animals in the ocean.

Questions

How does the seahorse hold onto plants?

- a) With its nose
- b) With its tail
- c) With its fins

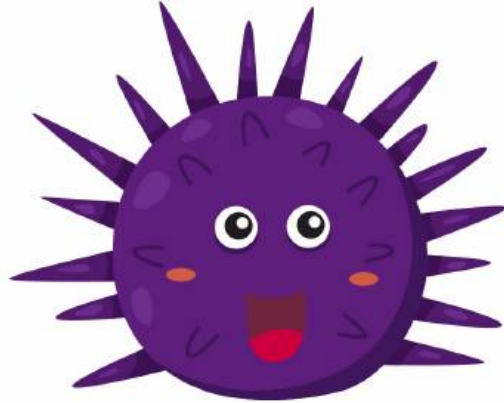

What do seahorses eat?

- a) Tiny sea animals
- b) Fruits and vegetables
- c) Bread and cheese

Who carries the babies in seahorses?

- a) The mother
- b) The father
- c) The sister

The Urchin

The urchin is a round sea animal covered in spikes. It moves slowly on the ocean floor. Sea urchins come in different colors, like purple, red, and black. They use their tiny feet to walk and find food.

Urchins eat plants and small animals. Some fish and crabs like to eat sea urchins, but their sharp spikes help protect them. Even though they look dangerous, some sea urchins are very important for the ocean!

Questions

What covers the body of the sea urchin?

- a) Fur
- b) Spikes
- c) Feathers

How do sea urchins move?

- a) With tiny feet
- b) With big fins
- c) With their tails

What do sea urchins eat?

- a) Candy and chocolate
- b) Plants and small animals
- c) Bread and cheese

The Xiphias (Swordfish)

The xiphias, or swordfish, is a fast and strong fish. It has a long, sharp nose like a sword. Swordfish swim quickly in the deep ocean. They can jump out of the water and move very fast to catch food.

Swordfish eat small fish and squids. They use their sharp nose to hit fish and catch them easily. They like warm water and travel long distances. Swordfish are one of the fastest fish in the sea!

Questions

What is special about the swordfish?

- a) It has a long, sharp nose
- b) It has a soft, round body
- c) It can live on land

What do swordfish eat?

- a) Fruits and vegetables
- b) Small fish and squids
- c) Chocolate and cookies

Where do swordfish live?

- a) In the deep ocean
- b) In the trees
- c) In a cave

The Oyster and the Clam

Oysters and clams are small sea animals with hard shells. They live on the ocean floor and stay inside their shells to stay safe. Sometimes, oysters can make pearls inside their shells. Pearls are round and shiny!

Clams and oysters eat tiny plants in the water. They do not swim, but they can open and close their shells. Some clams can live for more than 100 years! They are very special animals in the ocean.

Questions

What do oysters sometimes make inside their shells?

- a) A diamond
- b) A pearl
- c) A rock

What do clams and oysters eat?

- a) Tiny plants in the water
- b) Meat and cheese
- c) Fruits and vegetables

How do oysters and clams protect themselves?

- a) They run away
- b) They hide in a cave
- c) They stay inside their shells
